

4 REASONS

To Choose Dr. Bonine

Are You Having Problems with Your Wisdom Teeth?

Don't worry. You are not alone. 85% of all wisdom teeth will likely need to be removed, according to the American Association of Oral and Maxillofacial Surgeons (AAOMS).

Are You Anxious or Concerned About the Procedure?

Relax. It's normal to feel anxious and concerned. That's why we strongly recommend that you schedule a consult with Dr. Bonine. We'll answer all your questions about wisdom teeth and your treatment options.

Schedule a Consultation to Learn More.

A consult with Dr. Bonine can ease your worries. You'll learn about your wisdom teeth and find out about your treatment options as well as the available alternatives. You'll also learn about your options for anesthesia and how they can help you relax and make the procedure comfortable.

Four Reasons to Choose Dr. Bonine for Your Wisdom Teeth Removal

1. Non-Opioid Pain Medications

We've been a leader in the use of non-opioid pain medications for over 35 years.

We recognize that opioids have their place but our strategy and focus is to be effectively non-opioid.

Our experience has proven time and time again that powerful effective non-opioid pain medications do provide excellent relief from pain. In fact, most of our patients report that they are never worse than sore.

Plus, you'll have the added benefit of knowing that by using non-opioid medications, you've eliminated the addiction risk associated with opioids.

2. No Chipmunk Cheeks

Chipmunks are cute but what about chipmunk cheeks?

To virtually eliminate chipmunk cheeks, we'll be providing you with anti-swelling medications at the time of your procedure, and also after your procedure.

These techniques have worked effectively to eliminate swelling for our wisdom teeth patients since we opened our doors in 1984.

3. Platelet-Rich Fibrin to Enhance the Healing Process

Utilizing the latest medical technology breakthrough, we'll use your body's own platelet-rich fibrin to enhance the healing process.

Platelet-rich fibrin speeds up the healing process, improves overall comfort, and significantly reduces incidence of dry socket.

4. Your Choice of Anesthesia Options

To keep you comfortable during the procedure, you'll have the option to choose IV sedation to be slightly sedated, or general anesthesia to be completely asleep during the procedure.

DR. FREDRIC L. BONINE
DDS, MS, PC

Dr. Bonine is passionate about providing you with the best care for your wisdom teeth procedure.

We'd like to help you with your wisdom teeth.

When Is the Best Age to Remove Wisdom Teeth?

With wisdom teeth, removing them sooner is better than later. According to the American Association of Oral and Maxillofacial Surgeons (AAOMS), optimal results occur when wisdom teeth are removed by age 17 and best results with the fewest complications occur up to age 25. Researchers have found that the risk of complications from surgery only increases with age.

When Is the Best Time to Have Wisdom Teeth Removed?

The best time is when it's convenient for you and for them. Many families like to schedule wisdom teeth removal when their student is at home during school breaks: Holidays, Spring Break, and over the Summer vacation break.
